

Alstom Project Documentation Analysis

Generated on: May 21, 2025

Executive Summary

This report provides a comprehensive analysis of the documentation available for the Alstom project. A total of 1,950 files have been identified and categorized across various folders. The documentation includes technical drawings, project correspondence, specifications, and other essential project documents.

Key Statistics

Document Type	Count
Technical Drawings (DWG)	337
PDF Documents	870
Email Communications	245
Word Documents	45
Excel Spreadsheets	134
Images	177
Total Files	1,950

Document Types Analysis

Technical Drawings: The project contains 337 AutoCAD drawings (.dwg files), representing the technical specifications and design details.

PDF Documents: There are 870 PDF files, which may include approved drawings, reports, and other documentation.

Project Communications: The archive includes 245 email messages (.msg files), representing project correspondence and communications.

Office Documents: There are 45 Word documents and 134 Excel spreadsheets containing project specifications, reports, and data.

Recommendations

- Review the technical drawings to understand the scope and technical specifications of the project.
- Examine the PDF documents as they likely contain approved versions of important project documentation.

- Go through the email communications to understand project history and important decisions.
- Check Word documents for detailed specifications and reports.
- Review Excel files for any project data, calculations, or schedules.

Next Steps

To facilitate easier access to this documentation, we recommend:

- Setting up a document management system to organize these files
- Creating a detailed index of critical documents
- Identifying and prioritizing key documentation for review
- Establishing a system for tracking document revisions and updates
